

# FARMER'S ADVICE

- I. I sing to advise everyone to remember what I say. Don't believe the advertisement and propaganda about using new seeds. When you farm you shouldn't trade-in your ancestral seed. It deceives the people because the new seed can't be used again next year. When we need to plant we have to buy from the companies because we don't have our old seed anymore. The price skyrockets and the investors' profits rise
  
- II. They never stop exploiting and the people never stop suffering. The new seed changes the way we grow rice. Think of the past when we used the old seed and we were never hungry. Please consider this
  
- III. When we use the new seeds we have to use chemical fertilizer and insecticides. It exhausts our land and harms our health. The prices double and the farmers can't survive. The soil is depleted.
  
- IV. Before when we grew rice we used natural fertilizer. But now we are deceived into using the chemical fertilizer. We have to pay a lot of money. So we must borrow from the banks and the local creditors every year. When we can't pay them back we have to sell our land.

- V. Is this Karma or is it deception? Please tell us. This is privatization. Remember it is bad. Wherever it arrives, it changes things. It makes the people have no food to eat and makes it difficult to survive. So, it is the deception of the rich countries trying to control or profit from the poor countries.
